The Next Generation of Street Sweeping

Sweepers n Scrubbers Sustainability and Capability – Working Together

At Sweepers n Scrubbers, we specialise in delivering professional sweeping and scrubbing equipment built for demanding industrial and urban conditions. Our purpose is simple: to keep roads, traffic areas, and worksites clean and operating at their best every day.

We supply a complete range of machines for municipal, contracting, construction, and airport applications. From compact, highly manoeuvrable sweepers designed for tight spaces to heavy-duty truck-mounted units built for high-volume outdoor cleaning, our equipment is selected for performance, reliability, and real-world results.

As a trusted Australian distributor of world-class brands including Dulevo, Multihog, Sajas, Russman, and Brock, we connect councils and industry operators with globally recognised innovation and durability – supported by local expertise and service.

This brochure highlights our sustainable cleaning solutions, including fully electric sweepers and advanced broom systems, designed to help organisations reduce emissions, minimise noise, and meet ESG and Net Zero objectives without compromising capability. Because sustainability isn't just a policy goal – it's an operational advantage your community can see.

Why Councils Choose Sweepers n Scrubbers?

- Specialists in municipal sweeping solutions
- Trusted distributor of leading global brands
- Electric and low-impact options to support Net Zero goals
- Machines matched to your routes, workloads, and precincts
- Reliable performance for high-visibility outcomes
- Local expertise, backed by service and support

Ready to Future-Proof Your Street Cleaning Fleet?

If your council is assessing next-generation street cleaning, Sweepers n Scrubbers can help you make the transition with confidence. We'll support you to:

- Compare diesel vs electric whole-of-life costs
- Match the right sweeper to your routes and workload requirements
- Plan charging infrastructure and operational rollout
- Explore funding opportunities and fleet transition pathways

Let's make your streets cleaner—and your environmental footprint lighter.

The Future of Street Sweeping is Electric

High performance, zero emissions, lower lifecycle cost.

Municipalities are under increasing pressure to reduce emissions, improve air quality, and deliver better outcomes for residents, without increasing operational burden. At Sweepers n Scrubbers, we're proud to offer a new generation of fully electric sweepers designed to support cleaner cities, safer communities, and more sustainable operations. Electric sweeping delivers the performance you need while helping reduce CO₂ emissions, noise pollution, and routine maintenance—making it a practical, high-impact way to modernise street cleaning and meet sustainability targets without compromising results.

Multihog ECV

Cleaner Streets, Quieter Cities.

Compact, sustainable sweeper with fully electric drivetrain and battery options of 45, 60, or 75 kWh. Built for flexibility, it supports a wide range of attachments for sweeping, scrubbing, pressure washing, and groundcare—ideal for municipalities needing one electric platform across multiple applications.

Best for: Industries needing a compact, fully electric sweeper with multi-use operations, high dust control and PM certification.

Ideal environments: urban footpaths, public spaces, town centres, schools.

Key strength: Designed for comfort and extended shifts, features a 4x4 electric platform, ergonomic one-button controls, effective dust suppression, and certified PM2.5/PM10 filtration performance.

Dulevo D.Zero

Clean Streets Zero emissions.

The D.Zero electric sweeper delivers zero harmful gases, reduced environmental impact, and high sweeping performance with minimal water use. Designed to maintain shift capability and durability, the D.Zero supports cities and industries moving toward decarbonisation without limiting productivity.

Best for: Industries needing quiet, zero-emission street cleaning—ideal for high-visibility urban areas and night operations.

Ideal environments: City precincts, residential streets, public spaces, schools, bike paths, sportsgrounds.

Key strength: All-electric performance with low noise, reduced environmental impact, advanced dust control, and water-saving efficiency—backed by smart monitoring and fast charging capability.

Why Electric Sweepers are the Smart Choice for Councils?

Cleaner Air, Healthier Communities

Zero tailpipe emissions help reduce local pollution in high-traffic areas—supporting cleaner air and council climate targets.

Quieter Operations, Less Disruption

Significantly lower noise levels make electric sweepers ideal for CBDs, residential streets, and early-morning or night cleaning.

Lower Whole-of-Life Costs

Reduced energy use, simplified maintenance, and less downtime can deliver stronger total cost of ownership over the asset lifecycle.

Proven Performance with Strong ESG Outcomes

Built for demanding municipal routes, electric sweepers deliver reliable cleaning and efficient debris collection—without compromising sustainability.

Water-saving Efficiency

Minimal water use

Brock VS6E NG

Sustainability Meets Performance.

The VS6E combines full-electric power with proven sweeping expertise to deliver thorough cleaning with 0% CO₂ emissions and low noise levels. Optimised fan technology supports strong performance while remaining low maintenance compared to conventional sweepers, with improved driver comfort through quieter operation and reduced vibration.

Best for: High-performance city sweeping with operator comfort and low maintenance.

Ideal environments: Councils, municipalities, large-scale urban operations, mining industry.

Key strength: Strong sweeping performance, low noise, and reduced vibration.

SAJAS Turboline® Modular Gutter Brush

High performance sweeping with less waste.

Contrary to traditional gutter brushes, Turboline's modular design with replaceable brush elements, long-lasting steel base and biodegradable materials makes it a cost-effective and sustainable option to keep sweepers operational longer.

Best for: Municipalities, councils, and contractors maintaining kerbs, gutters, streets, car parks and public spaces.

Sustainability Key Benefits

Biodegradable Fibre

Any microplastic particles our biodegradable tufts may release will decompose naturally.

Reduced Environmental Impact

Recyclable tufts minimise waste and can be recycled as energy waste.

Sustainable Packaging

Compact spare-tuft boxes are easy to store, carry, and replace on-site, keeping your sweeper operational with minimal interruption.

Efficient Logistics

Up to 80% less packaging volume and reduced transport emissions.

Why buy the Turboline® Modular Gutter Brush?

Recyclable tufts
that minimise waste

Biodegradable fibres
that decompose naturally

Modular replaceable tufts
for longer service life

Fast on-site tuft replacement
to reduce downtime

Multiple tuft material options
to suit different roads & debris types

More sustainable logistics with
up to 80% less packaging volume
and reduced transport emissions

Built for Performance and Sustainability

Turboline® delivers excellent sweeping results while generating significantly less waste than traditional brush replacements.

With modular, replaceable tufts, councils and operators can maintain performance while reducing downtime and improving whole-of-life value.

Compact spare-tuft boxes are easy to store, carry, and replace on-site—keeping your sweeper running with minimal interruption.

Wide range of tuft options to adapt to your industry needs.

Mix materials to achieve optimal performance for your task. Each type offers distinct advantages.

- **Polypropylene (PP):** Flexible and lightweight, ideal for general sweeping.
- **Steel:** High abrasion resistance, built for demanding conditions.
- **Biodegradable fibres:** An ecological and sustainable option superior to other systems.
